

Playmix Basic

Budget Playground Safety Surfacing

**LOOKING FOR A SURFACE THAT TICKS ALL THE BOXES?
WE HAVE THE SOLUTION!**

PLAYMIX BASIC is a bi-laminate playground safety surfacing system which is poured on site and is suitable for use under and around fixed or portable playground equipment. The resultant surfacing systems are independently certified as capable of absorbing impact within limits defined by AS4422:2016 to a fall height between 500mm - 3000mm.

PLAYMIX BASIC is a cost-effective surfacing solution, intended for early years and low use environments. The finished surface is comprised of Playkote Precoat and industry standard high quality aromatic polyurethane. Both the finished surface and base layer are completely sourced from recycled car tyre rubber.

Playmix Basic

Budget Playground Safety Surfacing

KEY BENEFITS

- ✓ Anti-slip surfacing with shock absorbing properties.
- ✓ Multiple system components layer comprised of recycled car tyre rubber, creating a substantial environmental benefit through upcycling.
- ✓ Minimal ongoing maintenance costs.
- ✓ Greater lifespan & longevity than loose fill softfall.
- ✓ Safe and hygienic alternative to loose fill products such as sand and mulch.
- ✓ Fully porous system, when coupled with smart design can create a number of water management benefits.
- ✓ Compliant with AS4422, independently tested system.

Proudly Australian owned and operated, with warehouses in Adelaide & Brisbane, we are the specialists when it comes to synthetic surfaces in Australia.

PlayKote Precoat recycled SBR is made from recycled black rubber SBR granules, factory coated with high grade colour pigments as per the choices above. PCSBR is a great budget choice, ideal for use in low to moderate usage environments.

IMPORTANT! If you believe your surface will experience high usage levels and/or will be installed on mounds and sloped surfaces, then it is recommended you consider using Playkote-Gezolan EPDM, as it is much more suited to these environments. PCSBR surfaces in such high use areas that experience colour fade, darkening and or surface pitting will not be considered a product defect. Please contact your sales consultant for further information and/or surfacing options.

*Colour: **Lighter colours such as Steel, Pewter, Fawn and Caribbean** may experience a temporary yellow hue colour shift when installed with industry standard Aromatic Binders. The colour shift can last approximately 2-5 months, dependent on usage levels and UV exposure levels. Please ask your consultant about options available if this colour is selected and finished colour accuracy is important on your project.
